

PRODUCTION-GRADE LP BACKTEST · OPEN SOURCE · ZERO API KEYS

Honest measurement for Uniswap V3 + V4 LPs.

The only LP simulator that ships its own error metric. Every projection is reproduced end-to-end against real DeFi Llama fees and Binance prices — pool by pool, day by day. If the model lies, the harness says so.

MEDIAN ABS ERR

1.55 pp

15 / 18 pools

HOW IT WORKS

npm run validate:northstar

The validation harness.

Pull DeFi Llama fees, pull Binance prices, replay each pool-day, publish the error. Anyone can run it — same numbers.

01 PULL

DeFi Llama

18 V3 pools · daily fees

02 PULL

Binance OHLC

Daily prices, same window

03 SIM

Ticklab

Replay each pool-day

04 PUB

Error metric

Median, mean, max — printed

THE PROOF

% error per pool

Simulator vs ground truth.

15 pools, 30-day window, median 1.55 pp. The model that publishes its error is the model you can trust.

QUICKSTART

5 commands · ~30 s

```
$ git clone https://github.com/Mine-FNL/ticklab.git $ cd ticklab && npm install
$ npm run validate:northstar      # reproduces every metric in this one-pager
$ npm run dev                    # http://localhost:3000
```
